

Introduction

This chapter consists of statistical data on population size and its characteristics, taken from the last National Population and Housing Census conducted in the year 1395, comparisons made on the selected demographic items from previous censuses as well as the data on vital events such as births, deaths, marriages and divorces the history of which is presented as follows:

The history of data production on the population in Iran dates back to the Qajar period when some irregular efforts were made for enumeration. In the year 1297, the Civil Registration Department was established to register the four vital events. Registration of data on births, deaths, marriages, and divorces was a beginning for the collection of information on the national population and an incentive to assign an organization to collect the related data. With the approval of a statute in the year 1303, the responsibility for the collection of the required information was entrusted to the Ministry of the Interior. Undergoing several changes, the statute was legally approved by the former National Consultative Assembly in the year 1307, and the Civil Registration Department was renamed "General Department of Statistics and Registration". The Department has continued its legal duties since the year 1349 under the renamed title of "National Organization for Civil Registration".

Approval of the first Census Act by the National Consultative Assembly in the year 1318 led to the implementation of the first Population Census in Tehran on the 10th of the month of Esfand of the 1319 and 1320 which was postponed because of the political events occurred in the month of Shahrivar, the year 1320. In the month of Esfand of the year 1331, the General Statistics.

Cooperation Organization was formed and in the month of Farvardin of the year 1332, the Census and Statistics Act was approved. In the same year, after detaching from the General Department of Statistics and Registration and joining the General Statistics Cooperation Organization, for the first time, the Department of Census and Statistics undertook the responsibility of data collection exclusively. This organization was renamed "the General Department of Public Statistics" affiliated with the Ministry of the Interior in the year 1334 and conducted the first national population and housing census in the year 1335. With the establishment of the General Department of Public Statistics and the implementation of the National Population and

Housing Census in the year 1335, a new era began for statistical activities, and subsequently, different statistical surveys in various socio-economic areas were carried out every year. The increasing need of planning organizations for information and statistics as well as the need for close cooperation between the main data producing organization and planning organizations led to the detachment of the General Department of Public Statistics from the Ministry of the Interior and its affiliation to the Plan and Budget Organization under the title of the Statistical Centre of Iran (SCI) in the year 1344. As its first major activity, the SCI conducted a National Census of Population and Housing in the year 1345. As the occasion arises, the establishment Act of the SCI was revised in the year 1353 and the current Act of the SCI was approved.

After the approval of the new Act and structural renewal of the Centre, it conducted the second National Population and Housing Census in the month of Aban of the year 1355.

The 1365 (1986) National Population and Housing Census was the first under the Islamic Republic of Iran, the results of which provided the required information for conducting socio-economic development plans for the country. Unpredictable increase of population during the years 1355 to 1365 which show population changes trend after the year 1355 as well as extensive population movements due to the Iraqi imposed war on Iran, made basic changes in the statistical frames resulted from the National Population and Housing Census conducted in 1365 and this caused the planners and accordingly the SCI to find it essential to implement a nationwide enumeration in the years before the next decennial census. This enumeration, accompanied by a sample survey for the first time in the country, was implemented in the year 1370 under the title of "Multi-round Population Survey". The Fifth National Population and Housing Census was carried out in the year 1375; in the year 1385, the sixth National Population and Housing Census was taken across the country, and the seventh one was performed in the month of Aban, the year 1390 nationwide. And the eighth Population and Housing Census was conducted in the year 1395 in two phases namely from 3rd to the end of the month of Mehr as an Internet-based census and from 1st to 28th month of Aban as face to face interview.

The 1395 Census enjoys some features which distinguish it from the previous ones. In this Census, in addition to the change in the number of statistical items over the previous censuses, there were some changes in the tool and method of the census implementation, too.

1. For the first time, the data collection was made by a modern method namely using a Tablet device.

In this method, geographical information of all nation's places, households, and individuals was collected electronically. Moreover, the omission of paper (paperless census) and the use of the Tablet device made the census cost decrease, and data transmission and results release facilitate. Developing a census website and collecting data by the modern method helped a noticeable decrease in the enumerator's workload as well as an increase in the accuracy and quality improvement of the data.

1. Establishment of a control room system and daily monitoring coverage and quality of information and census executive activities in the whole country increased the accuracy and improvement of the quality of information.
2. For the first time, a backup file based on registered resources was used in order to decrease the enumerator's workload as well as increase the accuracy and quality improvement of the census data.

The statistics presented in this chapter consist of the results of the National Population and Housing Census conducted in the year 1395 and a summary of previous censuses results including the Multi-round Population Survey conducted in the year 1370. Moreover, statistics on the vital events of births, deaths, marriages, and divorces are registers, prepared by the National Organization for Civil Registration.

Definitions and concepts

Population (under enumeration): It includes members of all private settled households, institutional and collective, whose place of usual residence is located in Iran at the time of enumeration, as well as members of all private unsettled households. Foreign delegations, diplomatic corps, and their families are not included in the enumerated population. However, the Iranian delegations and members of the Iranian diplomatic corps, and their families at the Iranian embassies in foreign countries as well as people who work or study abroad and are expected to return to their household's place of residence after finishing work or study are among the population enumerated.

Average annual population growth: It refers to the ratio of the total annual population increase (decrease) to the average population in the same period, including all components of population change, including births, deaths, and immigration.

Population projection: It refers to the population estimates that are made on the basis of more or less reliable information from the past until the time of estimation or close to it and are usually used to calculate the population between two censuses or the years before and after it.

Household: The household is divided into three categories: private household, institutional household, and collective household. According to the type of residence and lifestyle, the private household is divided into two groups: Private settled household and Private unsettled household.

Private household: A private household consists of a number of persons living together in one residence, sharing their living expenses, and eating together constitute a household. In some cases, a private household can be one person.

Private settled household: It is a private household living in a permanent residence that was made from hard materials as well as in a fixed tent, hut, straw hut, etc, is called a "private settled household".

Private unsettled household: It is a private household not living in a permanent residence at the time of enumeration. This kind of household includes three following groups:

1. Households that either move from one area to another or live in portable shelters outside cities and villages;
2. Households that do not live in a permanent place and change their living place continually, such as gypsies;
3. Households that do not have a specific place of residence and usually pass the night at parks, in ruined places, under bridges, etc.

Institutional household: It refers to a group of people that lives together in an institution due to having a common objective or characteristics. That institute is responsible for accommodating them, (providing a residential place with services and facilities) according to permission or specific regulations. Specific examples of institutional households are military and police barracks and outposts, student dormitories managed by one of the universities except for married dormitories, mental asylums, etc.

Collective household: It is a group of people of whom all or some members have chosen a common place for their residence and jointly manage the affairs of life in that residence

because of some conditions (mainly common characteristics). There is more than one person in such a household.

Shahr (urban area): Every geographical area based on the Ministry Council's Approval is known as "Shahr" that has a municipality.

Village (rural area): One or more contiguous places and lands (agricultural or non-agricultural) located outside Shahr(city) borders and having independent registered or conventional boundaries. If a village is inhabited by one or more households at the time of enumeration, it is considered an "inhabited village", otherwise, it is considered an "uninhabited village".

Population settled in urban areas: Population settled in urban areas in any administrative division of Bakhsh, Shahrestan, Ostan, or country is the population of all Shars (cities) located in the division concerned, and the population of each Shahr is the total number of all private settled, institutional, and collective households members whose place of usual residence is located in that Shahr at the time of enumeration.

Population settled in rural areas: Population settled in rural areas in any administrative division of Dehestan, Bakhsh, Shahrestan, Ostan or country is the population of all villages located in the division concerned; and the population of each village is the total number of all private settled, institutional and collective households members whose place of usual residence is located in that village at the time of enumeration.

Unsettled population: Unsettled population in any administrative division of Shahrestan, Ostan or country is the population of all private unsettled households who were enumerated in the very division concerned.

Head of household: A member of the household who is acknowledged as the head by other household members., and usually is responsible for bearing all or major parts of household expenditures or making decisions on them.

Arrived migrants: Those members of private settled and collective households that have changed their Shahr (city) or village of residence between the two censuses of the years 1390 to 1395.

Age: It refers to the interval between the date of birth of an individual and the date on which the question is asked, which is measured in complete years.

Mean age: It refers to the average age of the population.

Median age: It refers to The age which divides the population into two equal groups in number.

Selected information

According to the last Population and Housing Census taken in the month of Aban, the year 1395, the total population of the country was 79926270 persons out of which 40498442 persons were male (50.7%) & 39427828 people were female (49.3%) and average annual population growth was 1.2% compared with the result of the 1390 Population and Housing Census. In the year 1395, the highest population fell in the age group 30-34 (10.8% of the population). In the 1395 Census, there were 24.2 million households out of which 75% were settled in urban areas and 25% were living in rural areas. In the mentioned year, the mean age for men and women was 31.1 years. Moreover, the mean age for men and women at the first marriage was 27.4 and 23.0, respectively.

In the year 1395, about 8.0 percent of all Shahrs (cities) had a population of more than 100,000 persons. Between the years 1390 and 1395, more than 4.3 million people were internal or international migrants, out of which 97.4% percent had their place of the previous residence in Iran, 2.6 % abroad and 0.3% did not state their place of the previous residence.

During the cited period, 48.0 percent of migrants had inter-provincial movement and 49.1% intra-provincial movement.

By using the mixed method based on the results of the Population and Housing Census conducted in the year 1395, the estimated population for the year 1400 was over 84 million persons.

In the year 1400, over 1.11 million births were registered, out of which 48.4 percent were female and males made up 51.6 percent of births.

In this year, over 568000 marriages were registered which increased by 1.5 percent compared with the previous year. It is worth mentioning that the highest registered marriages were 11.3 percent and related to the marriages in which there was no age difference between the husband and the wife. Moreover, more than 201000 divorces were registered which increased by 7.8 percent compared to the previous year.

Yazd	6014	3349	2665	5135	879

1. Difference between the total and sum of parts is due to the deceased persons with unknown identity in some of the death certificates.
2. Significant difference of the totals of urban and rural areas with the total of deaths is related to unknown cases. It is necessary to mention that the increase of deaths in those years such as in the year 1390 is due to delayed registration of deaths that occurred in previous years and were not reported to the National Organization for Civil Registration. Accordingly, specific projects were defined and conducted to decrease the unreported cases.
