

T *Introduction*

he household expenditure and income (household budget) were first studied in the year 1314 by the National Bank of Iran. The main objective of the study was to obtain the consumption coefficients for the calculation of the living expenditure index. After a long cease, in the year 1338, the Economic Studies Office of the National Bank of Iran collected statistics in this field by interviewing sample households in 23 cities of the country to revise the weight of the living expenditure index. Since the year 1344, the Central Bank of I. R. Iran has been conducting regular studies on the income and expenditure of urban households. Since the year 1347, the Statistical Centre of Iran (SCI) has initiated a larger survey of household expenditure in urban areas.

Since the year 1353, the survey has covered both the expenditure and income of urban households and has continued to date, excluding the years 1355, 1357, and 1360. Annually, the results are processed and published.

The survey of rural households expenditure and income was first conducted by the General Department of Public Statistics in the year 1342, and by the establishment of the SCI in the year 1344, the survey continued on a larger scale by the new organization.

Currently, statistics on urban households expenditure and income are being released by both the Central Bank and the SCI; however, those on rural households are being released by the SCI.

In this chapter, the statistics on average annual food and non-food expenditures of an urban and a rural household have been presented by deciles of expenditure, size of household, and average annual income of the mentioned households by income sources based on the results of the SCI's (sample) surveys. These surveys were taken according to the recommendations of the United Nations (NHSCP and SNA publications). The sample survey is conducted by visiting sample households in urban and rural areas.

Definitions and concepts

Household consumption expenditure: This is the rial value of goods and services provided by the household for own consumption or as gifts to others via purchase, household production, against service, trading, and free of charge (from organizations).

Household gross expenditure: This includes the rial value from the sale of second-hand goods.

Household net expenditure: Whenever the value of the second-hand goods sold is deducted from the value of the similar goods purchased in the statistical period, the amount left over will be the household net expenditure of the goods concerned.

Household, urban and rural areas: see Chapter 3, "Population" Definitions and concepts.

Expenditure deciles: They are the amounts of expenditures (net/gross) that divide the surveyed households into 10 equal parts in terms of the expenditures (net/gross). Accordingly, $(10 \times i)$ percent of the surveyed households have spendings less than the i th tenth of the expenditures (net / gross), ($i = .1$ and... and 10).

Household income: This refers to all the sums and rial value of goods and services received by the household members for the job done or capital invested or from other resources (retirement pension, assets income, transitional receipts, etc.). In this survey, various net incomes are as follows:

Net income from wage and salary earnings in the public sector: This refers to the income of all the wage and salary earners of the household members working in the public sector including their continuous and non-continuous monetary and non-monetary receipts after tax deduction and retirement contribution.

Net income from wage and salary earnings in the cooperative sector: This refers to the income of all wage and salary earners of the household members

working in the cooperative sector including their continuous and non-continuous monetary and non-monetary receipts after tax deduction and retirement contribution.

Net income from wage and salary earnings in the private sector: This refers to the income of all wage and salary earners of the household members working in the private sector including their continuous and non-continuous monetary and non-monetary receipts after tax deduction and retirement contribution.

Agricultural self-employment income: This refers to the household members' income as employers or own-account workers in the agricultural sector after the deduction of job costings is considered as the agricultural self-employment net income. The job costings cover paid wages and salaries, primary material charges, non-durable tools, amortization, other production charges, and job taxes.

Non-agricultural self-employment income: This refers to the household members' income as employers or own-account workers in the non-agricultural self-employment sector, after deduction of job costings is considered as the non-agricultural self-employment net income.

Miscellaneous income: This refers to all sums and rial value of goods and services received by the household through ways other than its members' employment, such as retirement pension and severance payment (golden handshake), earning assets, receiving subsidies, and the like.

Selected information

In the year 1400, the average annual net expenditure of an urban household amounted to 925.0 million rials including 678.5 million rials for non-food expenditures (73.3 percent) and 246.5 million rials (26.7 percent) for food and tobacco

expenditures which increased by 48.9 percent compared to the previous year.

In the year 1400, out of 678.5 million rials for average annual urban household net non-food expenditure, the highest and lowest share goes to housing expenditure with 332.6 million rials (49.0 percent) and recreation, entertainment and cultural services with 14.4 million rials (2.1 percent), respectively.

Furthermore, in the same year, out of 246.5 million rials for annual urban household food and tobacco expenditures, the highest and lowest share was for meat with 51.7 million rials (21.0 percent) and oils and fats with 7.6 million rials (3.1 percent), respectively.

In the year 1400, the average annual rural household net expenditure amounted to 519.1 million rials including 312.1 million rials for non-food expenditures (60.1 percent) and 207.0 million rials (39.9 percent) for food and tobacco expenditures which increased by 52.4 percent compared to the previous year.

In the year 1400, out of 312.1 million rials for the average net non-food expenditure of a rural household, housing expenditure with 96.3 million rials (30.8 percent) and recreation, entertainment, and cultural services expenditure with 6.7 million rials (2.1 percent) accounted for the highest and lowest proportion of expenditures, respectively. Moreover, out of 207.0 million rials for the average net food and tobacco expenditure of a rural household, cereals and cereal products with 45.3 million rials (21.9 percent) and spices, seasonings and pickles with 7.7 million rials (3.7 percent) had the highest and the lowest shares among the expenditure items, respectively.

In the year 1400, the average annual income of an urban household was about 1124.2 million rials. Out of the income sources, miscellaneous incomes with 572.2 million rials (50.9 percent) were of the highest share.

Furthermore, in the year 1400, the average annual income of a rural household amounted to about 637.1 million rials. Out of the income sources, miscellaneous incomes with 222.7 million rials (35.0 percent) were of the highest share.
