Price Indices

Introduction

Below you will find a short history of examination of prices and calculation of the related indices for urban and rural areas by both the Central Bank of the Islamic Republic of Iran and the SCI.

A. Consumer price index of urban households

The National Bank of Iran first calculated the cost of living index¹ in urban areas and wholesale price index for goods in the year 1315.

In the year 1338, the calculation of the cost of living index and wholesale price index for goods was revised due to change of the base year. By establishment of the Central Bank of Iran in the year 1339, the responsibility for calculating such indices was shifted to this Bank. With respect to remarkable changes in households' consumption patterns and expenditure composition, the Central Bank of Iran took the year 1348 as the base and made the second revision in the calculation of cost of living index and wholesale

price index for goods. The year 1353 witnessed some changes in national economic conditions, which caused it to be selected as the new base year, and the indices calculation underwent the third revision.

Considering the changes happened in the household consumption pattern resulted from socio-economic developments after the 1357 Islamic Revolution, the year 1361 was adopted as the base and the indices calculation was revised again.

In the year 1369 after the end of the Iran-Iraq War, which caused changes in economic conditions, revision in the base year was considered necessary and the Central Bank of Iran adopted the year 1369 as the new base for the calculation.

In the year 1378, the Central Bank of Iran changed the base year from the year 1369 to the year 1376 for calculation of price index of

consumption goods and services in urban areas. Moreover, since the year 1385, this index was calculated and disseminated on the basis of the base year 1383. It should be mentioned that the Statistical Centre of Iran started to calculate this index from the year 1381 and it was decided that from the year 1390, the information on this index be calculated according to the base year. It is noteworthy that the Statistical Centre of Iran calculated the information on this index based on the base year 1390 and published them in the Statistical Yearbook of Iran.

B. Consumer price index for rural households

The SCI conducted the retail price survey of certain consumer goods and services in rural areas for the first time in the year 1353. The results of the survey used to be published in the form of average prices of consumer goods and services in rural areas as quarterly and annual reports until mid-1357. The results of the survey for the second half of the year 1358 and the first half of the year 1359 were released as average prices and consumer price indices for rural households. Consumer price indices for goods and services for rural households were calculated and released from the year 1361 to the year 1375 with the year 1361 as the base. Moreover, the year 1374 was adopted as the base year in the year 1376, and the statistics for the years 1375 to 1383 were prepared and disseminated by Ostans and total country. From the year 1383 to the year 1391, the base year was the year 1381. At present, according to the latest revisions, the year

1390 has been adopted as the base for calculation.

C. Producer price index

Central Bank of the Islamic Republic of Iran started calculation of the producer price index in the year 1369. The most important uses of the index are early presentation of inflation trend and its application in national accounts for adjusting current prices into constant prices.

The related publications appear monthly and annually.

D. Price index for goods exported

Calculation of “the price index for exported commodities” started in the year 1376 in order to show changes in prices of exported goods. Figures relating to price index for exported and imported goods in the previous years were based on information obtained from the wholesalers involved in exports and imports. But, from the year 1382 on, statistics on exported goods, included in this chapter, are the very information obtained from the Customs, which covers all exported items.

It should be mentioned that since the year 1387 the information of wholesale price index for goods is not produced in Iran; therefore, the related tables (20-9 and 20-10 in 1-yearbooks) have been deleted from the yearbook after three years.

Definitions and concepts

Consumer price index (CPI): is a measure of changes over the base year in prices of a certain

fixed number of goods and services consumed by households.

Classification of groups for goods and services:

goods and services subject to indices are classified according to their intrinsic nature and international classifications as well as national requirements. However, the overall bases of classifications are those recommended by the United Nations (i.e, the COICOP² for goods and services, the SITC³ for wholesale trade, and ISIC⁴ Rev. 3 for producer) and modified with respect to the economy considerations of Iran.

In these classifications, goods and services are divided into a number of large groups, each of which consists of several sub-groups. Moreover, groups of goods and services are also classified according to special groups in terms of requirements.

Base year: is a certain fixed year against which percentage of changes of indices are compared.

The index for the base year is equal to 100.

Weight: contribution of any single good or service to the set of goods and services subject to indices is called "weight". In consumer price indexes for goods and services, contribution of any single good or service equals to a proportion of expenditure spent by a household to the total household expenditure. In wholesale price index, contribution of any single good is equal to selling value of wholesale of goods to the total value of wholesale of goods. In producer price index, contribution of any single good or service is equal to proportion of the production value or

selling value of a single good or service to the production or selling value of the set of goods and services.

Urban areas: see Chapter 3, Definitions and concepts.

Rural areas: see Chapter 3, Definitions and concepts.

Producer price index (PPI): shows the trend of changes in prices paid to producers in different economic sectors such as agriculture, fishing, manufacturing, mining and services. Producer price refers to the price which the purchaser pays to the producer for purchasing each commodity; it also represents the selling price of goods or services produced and supplied to wholesalers, domestic retail sellers and other industries and or exported to foreign countries.

Price index for exported commodities: measures changes in goods prices exported. Exported commodities include all commodities which are completely produced inside the country or exported as semi-finished goods or raw material.

Selected information

Consumer price indices for goods and services for urban households with an increase of 14.8 percent in the year 1393, compared with the previous year, reached 195.0 (base year= 1390). Compared with the changes in the index of the last year, this index experienced a decrease of 17.3%. Consumer price indices for two special groups, "goods" and "services" increased by 13% and 17.2% , respectively, compared with the year 1392. In the group for "food and beverages", "

the price indices for "spices and seasonings" with an increase of 15.7% had the highest change while the price indices for meat with a 5.5% increase had the lowest change. In the group of non-foods and services, this index for "water, electricity, gas, and other fuels" group with a 24.5 % increase had the highest change and in the "communications" group with a 5% increase had the lowest change.

In the year 1393, the highest and lowest general index was for the Ostans of Hormozgan and Qazvin namely 215.3 and 180.1, respectively.

Consumer price indices for goods and services for rural households in the year 1393 increased by 13.7 percent, compared to previous year, and reached 205.3 (base year=1390). Consumer price indices of rural households for goods and services for two special groups "goods" and "services" compared to the year 1392 increased by 12.2 and 18.2 percent, respectively. In the group "food and beverages", the highest and the lowest increase relate to the group, "spices and seasoning" and "meat and poultry" with 15.2% and 5.1% increase, respectively. Moreover, the group "tobacco" experienced a 4.2 percent rise in comparison with previous year.

In the group "non-food and services", the highest increase relates to the group "water, electricity, gas, and other fuels" with an increase of 25.3%

and the lowest increase belongs to the group "communications" with a 8.2 percent increase.

National producer price index for the year 1393, compared with the year 1392 increased by 14.8 percent and reached 204.5 (base year= 1390). Compared with the changes of the last year, this index had a fall of 19.7 in the year 1393. Producer price index in "health and social work" with an increase of 35.4% compared to the previous year, had the highest increase and also in "manufacturing" with an increase of 9.9% compared with the previous year, had the lowest change.

Price index for exported goods in the year 1393, compared to the year 1392 decreased 0.5 percent and reached 271.7 (base year= 1390).

In this sector, the highest increase compared to the previous year, relates to the groups "footwear" with a 30.1% rise and the "products of the chemical and allied industries" group with a 10.3 percent decrease had the lowest changes.
